COVID-19: key findings (218 countries and territories, to 9 March 2023)

Cumulative cases: 676,466,635. Cumulative deaths: 6,881,560. Case fatality rate: 1.02%.

Tunisia: 1,151,126 cases (9,554 per 100,000), fatality rate 2.55%.

Tunisia's worst week: 66,015 cases, ending 22-23 January 2022.

Countries with the highest incidence (1 million inhabitants or more): Austria, Slovenia, France, South Korea, Denmark.

Three groups of countries

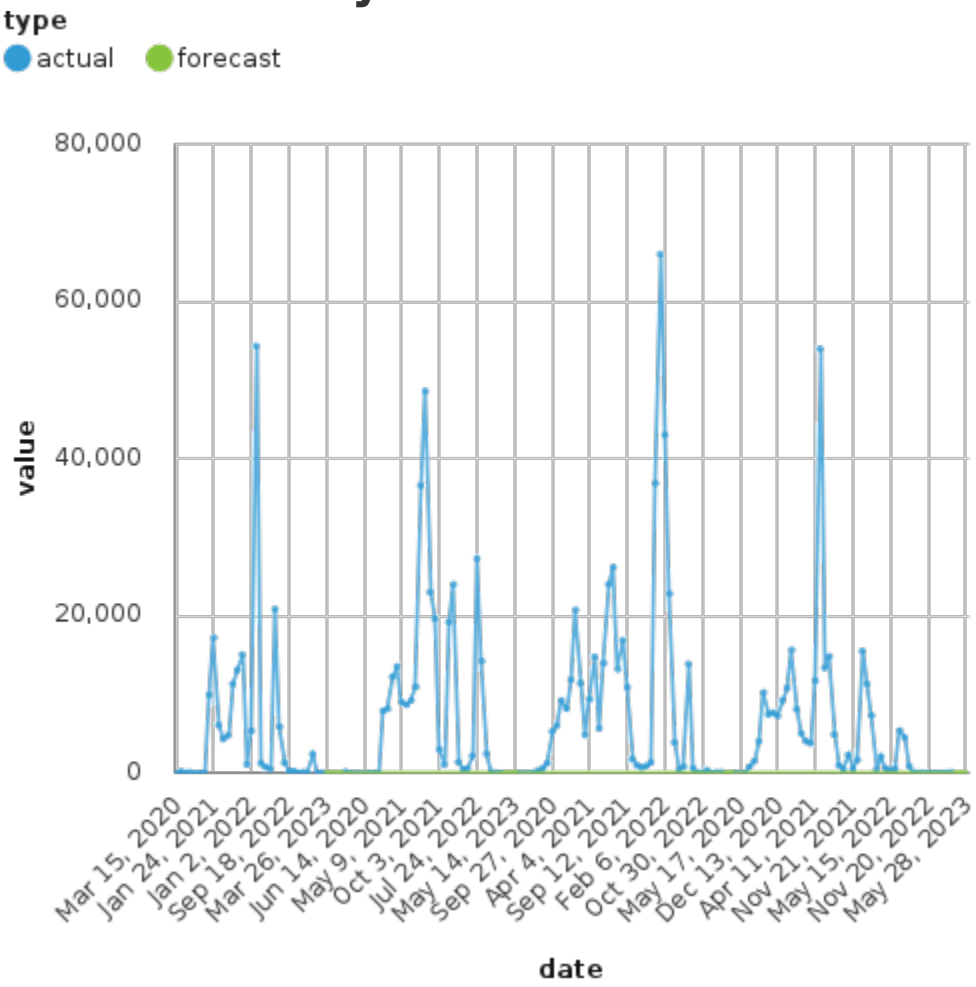

Method: k-means on 5 features per country (157 countries of 1 million inhabitants or more; North Korea and Yemen excluded as implausible). k = 3, silhouette 0.391 (weak structure: the groups overlap).

Low reported burden: 90 countries, median 1,372 cases and 18 deaths per 100,000, fatality 1.3%.

High incidence, low case fatality: 40 countries, 43,748 cases and 200 deaths per 100,000, fatality 0.5%.

Moderate incidence, high mortality: 27 countries, 12,894 cases and 293 deaths per 100,000, fatality 2.3%. Tunisia is in the third group: 9,554 cases and 243.5 deaths per 100,000, fatality 2.55%.

Tunisia: weekly cases and an illustrative forecast

Prophet did not beat a naive forecast in a backtest at four dates (average error 13,260 against 10,606 cases per week), because epidemic waves are irregular. The forecast is illustrative only.
